QUESTION

How many of you, whose phones or PCs are defective that you have abandoned them at your home place as garbage?

CHALLENGE

- ▶ How to reduce the amount of electrical and electronic waste (e-waste) that are produced daily due to advancement of science and technology in our home and offices ?

PROBLEM

- ▶ Research show that the amount of e-waste produced every year is growing exponentially.
- ▶ Global E-waste monitor reported that in 2017 only 24% of E-waste produced in UK was documented to be collected and recycled leaving behind 76% dumped on the environment or left at home and offices covering the space up.

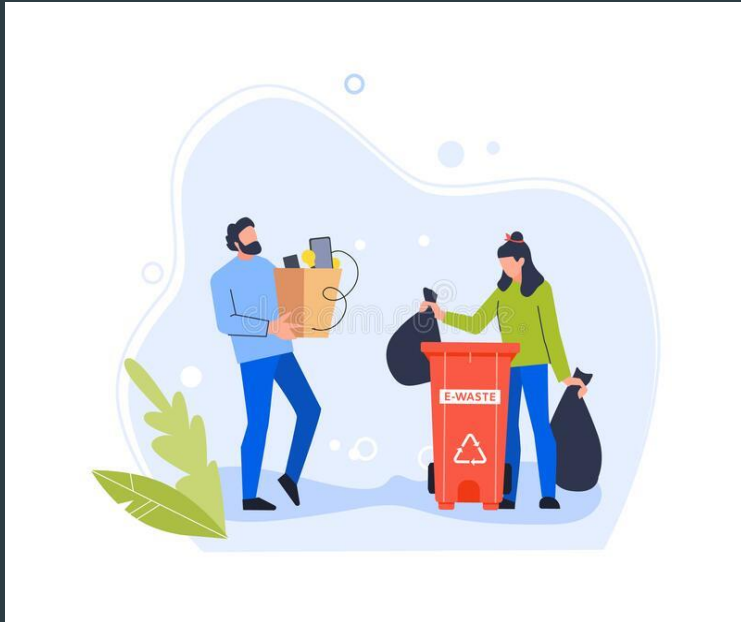

SOLUTION

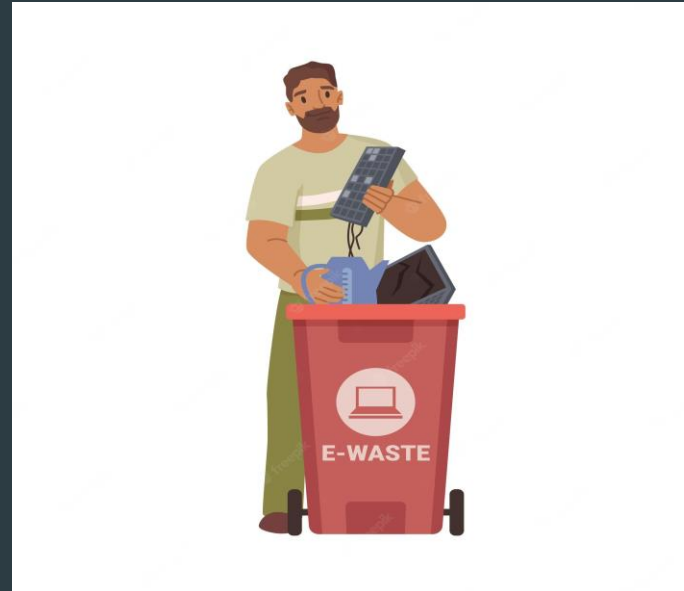

To create a system that will enable citizens to collect their E-waste for proper disposal and recycling.

ACTORS

- Clients Collects

- Admin (we) Receives and process

BUSINESS MODAL

► Clients

They will benefit by being awarded a **filecoin** as compared to their contribution on collecting the e-wastes

► Admins (We)

We will benefit from **selling to technicians** and other individuals who utilizes these devices by reusing them in performing other electronics maintenance and development.

Also, by **shipping** these materials to the **original manufacturers** for recycling and refurbishing them.

NO LITERING OF E-WASTE!!
